

CELL SHIELD

**ELECTROMAGNETIC
RADIATION
NEUTRALIZER**

USER GUIDE

USER GUIDE

What is Cell Shield?

Cell Shield is an innovative product that can protect its users against the potentially harmful effect of electromagnetic waves 24/7 for up to 3 years.

Cell Shield is a composite of twenty different compounds that have the propensity to absorb potentially harmful electric and magnetic waves. Among other protective attributes, these ceramics convert potentially harmful EMF waves into shorter far infrared rays, a useful bionic energy. This process works continuously to protect the users EMF exposure on their mobile device.

Disclaimer:

None of the statements made herein have been reviewed by the F.C.C. or any other government agency, nor has Cell Shield been tested by the F.C.C. For more information about Cell Shield products, to review our tested results, or to learn more about whether cellular phone use is harmful, visit our website at: www.millennium-products.com

How to Attach Cell Shield:

Clean phone surface or case for Cell Shield to adhere properly.

Remove safety tape from the bottom of the shield to expose adhesive surface, then attach to phone.

Certain surface textures may require additional adhesive.

Note: Manufacturer recommends product replacement after 3 years (Cell Shield can be re-attached to another phone using additional adhesive).

Where to Attach Cell Shield:

Place Cell Shield piece on the top right or left area on the backside of phone near antenna.

DO NOT place Cell Shield on the front side or near the battery section of phone due to the sensors and magnetic components.
